

PRESS RELEASE

Andcosta at EuroLuce – Milano Design Week 2023

18-23 . 04. 2023

Hall 15

Stand 121

Andcosta presents its new collection at EuroLuce, Milano Design Week 2023

The stand encapsulates the company's technical expertise, the defining element of the new products, which arise out of the intuition and imagination of the Andcosta design team and founder Carlo Zerbaro.

The space of the stand showcase innovations of a professional and architectural nature, in the refreshed looks of iconic products such as Circus, Circus Acoustic Panel, Luna, Grue, Pin and in the new product families such as Vitreo, B-Pro modular System and the New series of Acoustic Panels that can be combined with lighting systems.

VITREO

The minimal design of VITREO blends in a sublime light with a poetic expression.

The shape of the ribbed Pirex glass cylinder, smooth on the outside, ribbed on the inside, returns a rasterized atmospheric light. The new Vitreo versions come in matt black, chrome, brass, red and multicolour. The internal structure of Vitreo fades in chromatic shades to make your luminous object even more interesting.

In the suspended and floor-standing versions, Vitreo offers endless configuration possibilities.

B-PRO SYSTEM

B-Pro SYSTEM version is minimalist in style, yet they offer endless configuration options, merging technology with architecture through light.

The B-PRO line defines space by tracing elegant geometries that float in space.

The minimalist body is the essence of multiple lighting and configuration possibilities, especially thanks to the use of an articulation which when anchored to different surfaces, in the SYSTEM version, enables the creation of unique geometries, characterising the architecture with signature lighting.

Individual ultra-fine optical systems provide very sharp direct and indirect light.

The SYSTEM version gives you the option to use diffusers according to your needs: an opalescent filter for more diffuse light or a dark-light optic which, thanks to its thin grid, sections the light beam of the high-efficiency LED into miniature alveoli, drastically reducing glare and improving visual comfort. The dark-light optic, for direct light, is suitable for workstations with screens. Alternately, directing light with an opal diffuser on the indirect side dissolves the light emission, giving even lighting over the wall/ceiling.

B-PRO is equipped with a highly reliable light source with a CRI 90 value available in all colour temperature variants providing users with a wide choice for their environment.

ACOUSTIC PANELS THAT CAN BE COMBINED WITH LIGHTING SYSTEMS

The new Andcosta solutions find a perfect location where high quality light and acoustics are required. Thanks to constantly evolving technology and research into materials, Andcosta ensures excellent sound-absorbing performance by offering architects solutions designed primarily for office environments but which can also be applied to contemporary living areas.

We look forward to seeing you in Milan to show you our lighting solutions!
From 18 to 23 April, Hall 15 - Stand 121
See you soon!
